DETAILED ACTION

Election/Restrictions

Applicant's election made on 1/18/2002 is acknowledged. Applicant elected group I (claims 1-7 and 18-19) without traverse and cancelled claims 8-17 and 20-23.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-7 and 18-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Komasara et al. (US 6,240,693) in view of Hanson et al. (US 5,024,035) and Cretti (US 6,298,622).

Komasara discloses a form pattern assembly for receiving poured concrete comprising a rectangular block forming having a plurality of vertical 48, horizontal 26 are perpendicular fashion and extending between faces of concrete filling passageways or voids, a taper void 52' (see figs. 2, 4).

Komasara does not disclose expressly a facing made of a cementitious material and bonded to an exterior surface of block, block of foam comprises urethane foam, and a chicken wire mesh.

Hanson teaches a building block having a filling concrete 144 is made of urethane foam, vertical and horizontal reinforcing bar 145, 146, 150, 156, and facing made of a cementitious material (figs. 8-9). And Cretti teaches a floor and wall building

construction having chicken wire mesh 16 (see fig. 1). At the time of the invention, it would have been obvious to a person of ordinary skill in the art to modify and combine Komasara's invention with Hanson's teaching for urethane form concrete, facing made of cementitious material, and with Cretti's teaching for a wire mesh. The motivation for doing so would have been to provide a lightweight, integrity, cosmetically building block.
